The Fact Sheet has been finalized and distributed.

Thanks,

I think that on the Fact Sheet a more general statement should be made about Technical Assistance. The current statement on the Fact Sheet makes it seem like a TAG is a sure thing without any further explanation.

I think that instead of the current statement, we should use the following statement:

Community non-profit groups near a Superfund site may be eligible for technical assistance if funding is available. There are two kinds of technical assistance available: 1. A Technical Assistance Grant (TAG); or, 2. A Technical Assistance Service Contract for Communities (TASC). For more information on the two types of the technical assistance available, please call:

Janetta Coats
Technical Assistance Grant (TAG) Coordinator
Contact info same as on fact sheet
Or
Donn Walters
Technical Assistance Service Contract for Communities (TASC) Coordinator
Contact info same as Janetta, phone/email different

Good Morning,

Bart,

Thanks for the information.

9612183

Just want to assist, or made aware in the notification about the TAG.

Although EPA/PRP etc., is not doing anything at this time that a TAG technical advisor needs to review, applying for a TAG can be a lengthy process. It is important to allow enough time to make notification and process paperwork, approvals etc., for those that are interested and apply. The best opportunity for communities to apply for TAG exists during the RI/FS or the Pre ROD stage.

We would also have to check to see if there is a special account established and if monies are available or set aside by EPA, or other federal agencies, state or PRP.

Making notification of a TAG is a required activity for new NPL sites to obtain technical assistance.

A draft TAG availability notice for each new NPL site will be developed, provided to the site teams for review/comments and published in the sites local newspaper.

Most communities will not make application for a TAG.

Thanks,

Janetta

Thanks for your comments.

Please note, this was not in Bart's draft that was discussed with ODEQ, and Bart was not involve with this. I was in Puerto Rico.

Bill Little was not involve with this, he was in Australia.

This was made by someone else, a contractor ???? but anyway, mentioning that TAGs is part of the EPA communication process doesn't do any harm, is just information of the EPA communication and public involvement available activities. But we will keep you involve in anything we do in a future related to TAGs.

In the meantime, FYI, currently we are not doing any activity that will generate anything that a TAG needs to review, and we do not have any PRPs currently doing anything that a TAG needs to review. Therefore, cranking up a TAG at this time is sort of premature. Will let you know when we start doing something.

Bart.

Good morning,

Thanks for providing the Final Fact Sheet for Wilcox Oil.

In looking at the fact Sheet for Wilcox Oil the information regarding the Technical Assistance Grant (TAG) was included.

In the future when mentioning TAG related information could you please let me know just for information purposes. Health information is not considered as technical information about the sites.

For clarification purposes, you may want to consider not including the CIC next to the TAG Project Officer name so that the community does not think that there are two CICs assigned to the site.

The info below was in the Fact Sheet.

A TAG is available to local citizens' groups to hire a technical advisor to interpret site studies or site-related health information for area residents.

Thanks,

Janetta
